I hope you would consider my application for the Junior Software Developer position at Bold Commerce that has recently become available. I have attached my updated resume that contains detailed information on my qualifications, skills and relevant work experience. I am currently a student at the University of Manitoba.

I am on path to complete my Bachelor's degree in the coming fall term. My technical skills include using Programming languages such as JavaScript, Java, Python, HTML, CSS, and XML. I have worked with Operating Systems including UNIX, and Windows. My daily routine includes developing, debugging web applications, database systems and learning new skills to add to my tool set.

I have produced highlights of my personal projects for your consideration below:

- Established secure web application in addition to developing a back-end database for my personal website.
- Worked as part of a team responsible for designing and developing a web application for a class project with the focus on a user-friendly interface.
- Worked on developing an easy-to-maintain IOS application for a family restaurant.
    - Responsibly included determining the needs, designing templates and database, and testing the product to specification.

I believe my skills and capabilities will make a significant contribution to Bold strengths. I am grateful to you for the time in reviewing my application. I hope to progress to the next stage in the application process. I look forward to hearing from you soon.

P.S. I have taken a very different stream than most to get to this point. I always put the customers first, my team second and myself last. I believe this attitude allowed me to find success and happiness in my previous jobs and I plan on bringing the same ENERGY to BOLD.
